

(a) Qwen3-32B → Qwen3-8B-SFT

(b) Polaris-7B → DS-distill-1.5B

(c) Polaris-7B → DS-distill-7B

Figure 1. In-domain math accuracy (average over six English benchmarks) is insensitive to the difficulty of the training problems, measured by the teacher's pass-rate. Each figure compares three BigMath subsets: **easy** (pass-rate = 1, teacher solves all four rollouts), **hard** (pass-rate = 0, teacher solves none), and **random** (randomly sampled from the whole set). The three subsets converge to nearly identical final accuracy across all teacher–student pairs.
