

(a) LiveCodeBench (DS-distill-1.5B)

(b) LiveCodeBench (DS-distill-7B)

(c) GPQA-Diamond (DS-distill-1.5B)

(d) Training on non-math domains, evaluating on math (DS-distill-7B)

Figure 3. Cross-domain generalization in single-teacher OPD. For same-origin OPD, training on math prompts, trained student's performance on science and code also approaches teacher's performance and vice versa. For cross-origin OPD, cross-domain generalization is much worse: in (a) and (b) (LiveCodeBench evaluation results), the green curves (training on code prompts) are ***consistently and substantially higher*** than the blue curves (training on math prompts). Dashed lines mark the teachers' standalone accuracy.
