

(a) Setting 1. Math teacher: JustRL-1.5B; Science/IF teacher: Nemotron-1.5B; student: Dev-1.5B.

(b) Setting 2. Math teacher: Nemotron-1.5B; Science/IF teacher: JustRL-1.5B; student: DS-distill-1.5B.

Figure 4. ***The MOPD seesaw effect***. Changing the mixture ratio of different teachers' allocated prompts significantly changes the OPD students' capabilities in different domains. For example, in subfigure (a), student's GPQA-Diamond (scientific reasoning), LiveCodeBench (code reasoning), and IF-Eval (instruction-following) performance gradually drops down as we increase the proportion of JustRL-1.5B (math teacher) data.
